

# Not even for a moment.

Welcome to BusVision. We're the premium system of school bus surveillance brought to you by Digital Security Vision. A video surveillance system which is also a management tool. Not only does our digital system give a much clearer picture than VHS, we're capable of viewing several positions on and off the bus at the same time.

Our compact equipment is much smaller than existing systems, with no bulky cover or box. There are no tapes to be used, handled and stored. The system itself is considered to be the finest in the market, *offering an uncontested 8 channels of video!* And, just to make certain, it has been tested in the field for more than a full year.

We know this is the finest, best-designed school bus surveillance system available today because digital has been our field of expertise for many years. Our school bus field testing over eighteen months has resulted in an outstanding product line.

*The propriety yellow casing on the outside of the bus discretely conceals the stop arm sentry.*

Our multi-camera system allows us to carefully watch over one hundred percent of the bus one hundred percent of the time.

We watch students as they board the bus. We watch them continually; wherever they sit. We watch drivers, the stairwell, the chairlift, outside the bus, anywhere that protects students, employees and limits liability. Even when the bus has stopped for pickup or drop-off, we're watching and recording vehicles passing the flashing lights. Our unique and very discrete two-way external system is capable of registering the license plate numbers of cars that fail to stop. BusVision offers up to eight channels of video and two channels of audio, which means we can put many different camera configurations on the bus and ***all cameras are recording at the same time.*** BusVision requires no

switching.

We watch out to make sure our clients have exactly what they need, when they need it. Our system, once installed, can be upgraded as required.

We're always watching students. We watch and protect drivers from unwarranted criticism. We watch for trips and falls and discussions at the door!

The principals of BusVision have worked within the School Board System and are familiar with your needs.

We watch your bottom line by bringing products with life cycles that match your bus, making our digital systems not only high performance but very cost effective.

High performance at a lower annual cost than VCR.

A digital system means a virtually ***maintenance-free system.*** No more tapes to handle and on-board storage far

exceeding VCR. Variable frame rates and resolution allow you to customize to your storage requirements.

Since BusVision has a life expectancy many times that of a VCR, with maintenance and capital cost factored in long-term, the cost is clearly lower.

## **This technology is affordable now!**

Our PC management platform is state of the art. Video management now becomes another tool to be used on your District-wide network. You may view the visuals on the bus or move the data from the on-board computer easily onto your office system where it can be viewed, stored or passed along to

*Each dome can house up to 3 cameras and can be placed anywhere within the bus.*

*Can you spot our cameras?*

interested parties. You are also able to email still frames or video clips or integrate into a letter, using Microsoft Word. Burn video records, onto a CD for storage or transfer to principals or other interested parties. Video becomes very flexible, retrievable and storage takes up no physical space! It can be saved for years, if that suits your purposes. You can even provide video (tamperproof) to authorities.

Every incident is pinpointed by time and date. Retrieval of exactly what you want to see is a few clicks away! Anyone within the school system can view video at his or her desk.

When it comes to meeting your needs, improving your service and guarding the children in your care, we're always watching for ways to do it even better.

*Our recorder is smaller and lighter than a VCR camera. It can record up to 8 channels simultaneously and our variable storage rates will allow for weeks of on-board storage. And all with hands-off operation. PC compatible, captured visuals can be sent to parents and administrators by email. Our recorder comes standard with a 30 GB harddrive, with larger available.*

**Why Digital now?**

Digital is the natural evolution for school bus video and data management. BusVision digital is perfect the transition for your improved video data management, but does so much more.

Our technology will turn digital video into a true management tool, leading the way to new applications as we travel this path together. A path that leads to, among other things, wireless applications.

Digital Security Vision, makers of BusVision, is not a camera company. We are systems integrators with expertise in digital video management. Today, with our keen interest in the school bus market, we are ready to lead the way. Because we have a wealth of school bus management expertise on staff we are able to work with you to create digital solutions designed specifically for your industry.

Our unique solutions in child care and industrial applications have given us extensive experience on which you are able to draw on, and will come to rely.

This is not a VCR replacement but a new technology with much more to offer the transportation management professional. This is the future.

Compare	Your current systems or other digital products	BusVision
Up to 8 cameras	?	YES
2 lines of audio	?	YES
Storage space required	?	NO
Extensive video storage on board	?	YES*
